TURK AND LEWIS DEPART BOTH COVERED WITH LEIS

Turk and Lew's have sailed away to come again another day. Mr. and Mrs. Frank J. Turk and Mr. and Mrs. Oscar Lewis and son yesterday took passage on the steamship Mariposa for San Francisco, purposing to spend a vacation on the Mainland and to return to the Paradise of the Pacific early in the month of Jan-

A large number of the friends of the "Heavenly Twins" were on hand on the Oceanic wharf at 2 o'clock to bid au revoir and to cast about their necks the ever appropriate and beautiful leis twined from the native flowers of Hawaii nei. One would never guess that Turk and Lewis were men who are engaged in he business of supplying masters of versels with crews; men who engage in that and of an occupation are not usually as well dressed and well appearing as are the two inseparables. They certainly presented a gorgeous spectacle, dressed as they were in the height of waterfront fashion and sporting the most gorgeous and beautiful of floral wreaths. And the pet poodle dog which trotted along the docks at the patent-leather heels of the big Turk added all that could be desired in the way of an anstocratic appearance to the famous pair.

Big Charles McCarthy was not down at the wharf to bid aloha to the "twins" for the reason that McCarthy had just been engaged in a little misunderstanding with a sailor on the waterfront and was busy explaining matters with the representatives of the law. There were plenty of people on hand, however, to see the famous shipping men off, for they have made many friends in Honolulu as well

as enemies, and tueir send-off was in every way a great success. Turk and Lewis are coming back allight; Honolulu is too good a place to leave forever, and when the sugar season agai i opens and business begins to pick up again on the waterfront Turk and Lewis will be found at the old stand ready to supply a skipper with sailors for a voyage at a moment's notice.

Meanwhile, during the absence of the "Heavenly Twins," McCarthy will rule the roost and bag all the sailors he can lay his hands on.

For the first time since globe is still a blank upon our charts?

It is the habit of many people to decry the efforts of polar explorers as being bare of results comparable to the expenditures of life, time and money Fortunately for the progress of terrestrial knowledge, these complainers are the men who measure everything by dollars and cents, and such men seldom penetrate far enough into the records of exploration to find the far-reaching

The result of polar exploration in the past has been productive of great results, but these results enter so naturally into the development of commerce and the various branches of natural sciences that, like the contributory wa ters of a river, the original source is lost in the new stream. To see the ultimate use of the results of research difficult; but a brief analysis of the outcome of work of the past will indicate the complex but very important usefulness. Early voyages into the frozen seas were directed only by ambitions to conquer new lands for commer-MADRID. Oct. 3L-It is officially ad- ciai purposes. From their efforts it now ing generations, many hundred times outlay.

The aim of the modern polar effort is to understand the conditions of the specific knowledge of the two polar physiology of the human system without a knowledge of the circulation. It function of the stomach without a clear ed, the Government has decided to not Island and the boulders of New Jersey vigorously and pardon no one. The Basque cannot be well understood until we study the moraines of the polar gla-SPANISH MINISTER OF MARINE. clors. In meteorology there are various MADRID, Oct. 31.—Gen. Azearraga, the problems which are hidden by the hand these problems will depend upon future development. The science of forecasting weather is still in its infancy, but upon its perfection depend thousands of fives and millions of dollars. We cannot hope to find the origin and destiny of storms and cold waves, and a hundred other weather peculiarities until the atmospheric conditions, the terrestrial topography, and the interchange of air and sea currents are carefully noted at the pole. In geology and in meteorology there is much to be gained by a continuation of polar exploration. The key's which will open the doors of new chapters are lost in the polar snows; the search will be difficult, but we must persist in looking.

Terrestrial magnetism is still a name for something of which we know very little. What is it? How does it origi-WASHINGTON, Nev. 2.- The War De- nate, and what about its functions and magnetic pole, but this has been done before him by four other expeditions and still, if we draw a circle with a known Victoria land, it will only be possible to say that the pole is within this circle. The voyage of the Belhighway in size comparable to the Straits of Magellan, with 500 miles of

the coast of a new land, was discovered. The various scientific records will form several volumes of new contributions to the knowledge of our globe, and who will say that such contributions are not worth to the coming generations the paltry sum of \$60,000 which was expended? This amount multiplied by 100 would not represent the money spent yearly on pleasure yachts and racehorses, and surely these do not yield a result comparable to our increased knowledge in the annals of science from polar exploration.

The prospective value of this work has been confirmed by various recent Government enterprises. And by their verdict we may assume the question as answered for all time in the affirmative Individuals may engage in notional and useless ventures, but a Government does not give time and money to doubtful projects. Norway, Belgium, England, Russia and Germany, are now engaged in this effort to clear up the mysteries of both poles, and would not be thus occupied if there were not tangible results in the range of possibility.

England and Germany are organizing expeditions. Will Americans who have carried the Stars and Stripes to the farthest reaches of the earth stand aloof and look on? If we are to have a wellequipped expedition, ready to work with England and Germany, some mer-The combined armies of peace, could in this way, march into the white silence, the unbroken icy slumber of centuries about the South or the North Pole, and there collect the needful scientific spoils.

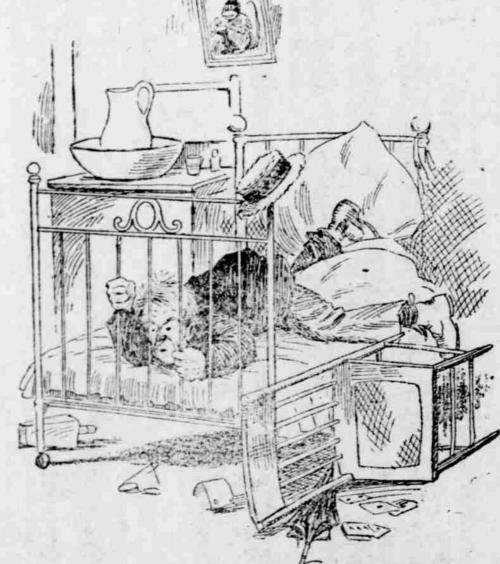

EMBALMED LINCOLN'S BODY. NEW YORK, Nov. 1.-While workmen were clearing up a cellar formerly occupled by the late Dr. Thomas S. Holmes, who had a drug store in Brooklyn, they came across a box securely fastened which was found to contain the petrified head and trunk of a girl about 12 years of age. The police made an investigation and became satisfied that the skeleton was the property of Dr. Holmes, who, it is said, experimented with an embalming process which he had used during the Civil War and the secret of which he died without revealing. It was Dr. Holmes' boast that he had discovered a process of embalming that would ossify bodies. He was at work on the process when he died. During the war Dr. Holmes embalmed the bodies of many soldiers. He also embalmed the body of President Lincoln.

EARTHQUAKE AT JACKSONVILLE. JACKSONVILLE, Fla., Oct. 31.-Eight distinct earthquake shocks were felt in Jacksonville today. The first shock was at 11:15 a. m., and shook some of the large buildings in the city. At 11:25 another shock equally as severe was felt, and they continued at fifteen-minute intervals until 12:20 o'clock. At 4:03 this afternoon the seventh shock was felt, followed several seconds later by a report and several shocks, the severest of the day. The last disturbance made the windows rattle in several sections of the city. There was no disturbance in the vater, nor were the shocks severe enough to cause any damage.
